

Release Notes SmartDots Software v.2021/Q1

SmartDots 2.3 software version will be released march/april of 2021. Changes include the **priority 1 software and Web API** wishes for **2021/03** listed on GitHub ([here](#)) as well as some minor tweaks/adjustments. All wishes, changes and additions are listed on the next pages. All features can be tested in the demo environment. See <https://github.com/ices-eg/SmartDots#demo>

#170: An AQ code is needed before annotation can be approved.

More info at: <https://github.com/ices-eg/SmartDots/issues/170>

The server administrator now has the option to pass an extra setting 'RequireAQForApproval' to the SmartDots software. If this setting is set to 'true', annotations can only be approved if an AQ-code is assigned to them. This setting is 'false' by default.

The screenshot shows the 'Annotations' section of the SmartDots interface. It contains a table with the following data:

	Parameter	Creator	Created	Age	AQ	Ap...	Fix...	Comment
<input checked="" type="checkbox"/>		user9	22-02-21	0				

Below the table is a toolbar with icons for document, edit, delete, pin, and approve. A message box at the bottom right states: 'A quality code (AQ) is needed to approve the Annotation'.

An implementation of this can be found in the [demo](#) environment, where this setting is currently activated.

Other changes

- An extra setting 'IgnoreMultiUserColor' has been added because the users at ILVO were not happy with [this change](#), released in the previous update. When this setting is set to 'true', the recoloring feature when selecting multiple annotations will not be applied. This setting is 'false' by default.
